Describe the present and original (if known) physical appearance

The Rankin Octagonal Barn is of fairly simple construction, an eight-sided farme structure covered with vertical wide board siding, each side of the octagon measuring 24 feet in length. There is no foundation; the sill beams rest on single stone blocks at the angles of the octagon. The roof is covered with corrugated sheeting, with a matching octagonal cupola with a sectional conical roof covered in the same material. The roof is the most unusual feature of the Rankin barn, and is unlike any other round or polygonal barn roof in the state. Basically a modified sectional design, the roof is built in two sections which seem separate when viewed from the outside, giving it a disjointed appearance, but which can be seen to be attached from the interior, creating a clerestory effect. Since there are no windows or light openings in the siding, this unusual design was probably intended to provide some light inside the barn.

The cupola, which would also have provided a certain amount of light and ventilation, is now boarded over at the base, and has been since before the current owners bought the farm. The cupola is also fully covered with siding around its exterior, but was probably originally open into the barn, with louvered siding or even full windows for the necessary ventilation. The barn itself is in reasonable condition and is being maintained by the owners, who are slowly repairing sections of the floor and the roof. The floor joists have suffered some deterioration, and the sleeper/sill logs on the hillside elevation are in poor condition.

Statement of Significance (in one paragraph)

The Rankin Octagonal Barn is one of only two octagonal barns known to have been built in West Virginia, and the only one still standing. Few round and octagonal barns were ever constructed in this state, and the Rankin barn is one of five still in existence.

EXPLANATORY NOTES

The Rankin Octagonal Barn at Wilding, near Ravenswood in Jackson County, was built by the Rankin family, probably George L. Rankin, a Jackson County representative to the West Virginia House of Delegates.

George Rankin was born near Ravenswood and was educated at the West Virginia School for the Deaf and Blind at Romney and Lane Theological Seminary in Cincinnati. Ohio. He was ordained a minister in the Presbyterian Church and lectured publicly until 1918, when he was elected to the House of Delegates. Although the property was passed down through several generations of Rankins, the family left Jackson County during the Depression of the 1930's and the farm was rented out for some years. The present owner, Okey L. Butcher, bought the property from the Wilkinson family in 1958.

The Rankin barn is the only octagonal barn still standing in West Virginia, one of only two known to have been built in the state. Although two possible construction dates have been put forth – c. 1905 and the 1890's – the earlier date is more likely, since the majority of octagonal barns were built before 1900, predating the introduction of the cylindrical silo. Vertical siding, like that used on the Rankin barn, is generally found in earlier barns, as is the typical ground floor arrangement of a central alley with stalls situated on the side. In addition, local tradition states that the barn was built several years before the house on the property was constructed in 1900. Carl Shockey, 82 years old and a lifelong resident of the area, remembers the barn standing when he was a small child. Shockey also remembers working for the Rankins as a boy, threshing hay and loading it in the octagonal barn.

Although the Rankin Octagonal Barn bears some resemblance to the Kuykendall Polygonal Barn at Romney, where George Rankin was educated, no direct relationship between the two barns can be established. However, if Rankin did model his octagonal barn after the Romney structure, it would place a later construction on the Ravenswood barn, since the Kuykendall barn is known to have been built about 1906.

The Butchers and other local residents believe the barn to have been constructed by a carpenter from Pennsylvania by the name of Carmichael, who is said to have built several round and/or polygonal barns in that state. Mr. Carmichael came to the Ravenswood area in the late 1800's, and his granddaughter still lives in the Wilding vicinity.
