Jackson's Mill is a three story high structure, 44' long by 36' 6" wide. The weatherboarded frame structure is maintained by West Virginia State 4-H Camp personnel under the operation of West Virginia University Cooperative Extension Service. When West Virginia acquired the mill in 1921, it required repair. Much of the siding was replaced and has been regularly painted and maintained since then. The roof was replaced in 1956 with hand-cut shingles made in West Virginia. The roof is regularly weatherized and is stained green--most recently in May 1971. The exterior of the mill was repainted in June 1971.

Many of the original poplar beams and studding and some original oak flooring can be seen in the mill. Much of the oak flooring had to be replaced.

The stone foundation is enclosed on each side and open from the river end. The foundation of the building has been reinforced.

On the first floor are the large wooden gears and wooden cogs that were used in the mill's operation. The unusual horizontal mill wheel and the 6' by 150' dam across the West Fork of the Monongahela River are gone. The wheel will be rebuilt. Its primary source of power will be electricity since damming the river would interfere with flood control and conservation efforts in the West Fork Soil Conservation District.

To the left of the first floor front entrance is the museum information center. The rest of the floor houses larger agricultural items donated to the museum. Grist and saw mills were brought to the mill some time ago and are stored here until the mills are restored to working order.

The second floor is reached by a narrow stairway in the northwest corner of the building. Here are the original grain hopper and one of the original mill stones. Until restoration of the mill and erection of the exhibit hall, the second floor is dominated by displays of exhibit items. Glass cases contain letters and other personal items that belonged to General Jackson and to Union General Joseph A. J. Lightburn, Jackson's boyhood friend. Smaller tools and household exhibits are arranged and labeled. Since the building has no central heating system, the more fragile items: clothing, glassware, dolls, and Lightburn's military effects are moved and stored when the museum closes for winter.

The third floor is not regularly open for visitors. This is a gabled area smaller than the lower levels. This area is used for storage. The front doorway on the third floor was originally equipped with a pulley and hoist to raise sacks of grain from the ground level in front of the mill.

Currently the interior of the mill is electrically wired and exterior lights illuminate the mill at night. Natural light is provided by 30, doublesashed, multi-paned windows and a doorway on each level.

Care has been taken to conform the original design and appearance of
As of March 1975, the original horizontal waterwheel at Jackson's Mill, Lewis County, West Virginia, has not been rebuilt, and no changes in the way of restorations or reconstructions have been accomplished in the proposed museum complex.
**STATEMENT OF SIGNIFICANCE: JACkSON'S MILL**

Jackson's Mill, in Lewis County, standing in its present form since 1637, was located on the farm where Confederate General Thomas J. ("Stonewall") Jackson spent 12 years of his boyhood.

The mill is the focal point of interest in a state park of the same name which in 1924 became the first state camp in the United States for the 4-H Club.

A combination grist and saw mill was first erected by Edward Jackson, Stonewall's grandfather, some time before 1600, three miles north of Weston, on the east bank of the West Fork of the Monongahela River, immediately across the stream from the present location.

Harrison County records of December 20, 1780, give Edward Jackson liberty to build a mill on the West Fork at "Pedros Fish Pot," while an Act of the Virginia Assembly, January 20, 1800, declares the Monongahela publicly navigable as far as Edward Jackson's Mill on the West Fork.

Due to erosion of the bank, the foundations and machinery of this mill were moved to the opposite bank some time prior to 1830 and housed in a wooden building braced with hand-hewn timbers. This move was accomplished by Cummins Jackson, son of Edward, who after much litigation, had come into possession of the mill following his father's death in 1824. In 1837, following a fire, the present grist mill was erected, and in it remains much of the original equipment. A saw mill 30 feet away is now gone, but under Cummins Jackson it supplied much of the lumber for building Weston. Cummins built a dam 6 feet high and 150 feet long to operate his mills. He died in California in 1849 during the Gold Rush. The mill then passed through many hands, but continued to operate until 1892, when Wilson Arnold was the proprietor.

The log house and succeeding frame house where Stonewall respectively lived and spent his vacations are gone.

At the age of five Thomas Jackson was orphaned and for the next twelve years spent most of his time in the mill community of his Uncle Cummins, where he made flour, hunted, fished, went to school, learned to play the violin, earned money helping to build the Parkersburg-Staunton Turnpike, and at the age of 17 took a turn at teaching school. Biographers agree that his...
Statement of Significance - Jackson's Hill (cont'd)

Chief characteristics were developed in this environment and during this stage of his life.

A museum installed in the mill is operated by the Cooperative Extension Service of West Virginia University and is attracting thousands during the summer months. Plans for a Jackson's Mill Museum Complex have been developed under a grant from the Benedum Foundation. Architects have prepared detailed landscape and architectural plans for developing the 5 acre area around the mill and the pioneer McWhorter cabin to depict all areas of culture of this region from 1840 to 1865. The saw and grist mills will be restored. The second Jackson home and some outbuildings will be re-constructed. The Jackson home will contain conference facilities. An exhibit hall is to be built to house domestic, agricultural and industrial equipment of the era, now housed in the mill. Secondary roads 12 and 10 are to be relocated to divert passing traffic and to allow access and parking for complex visitors.

Special emphasis will be the commemoration of the two Confederate and two Union generals who grew up in this area; Stonewall Jackson and his cousin "Mudwall" Jackson, who fought with the Confederacy, and Union commanders Joseph Lightburn and Nathan Goff.
