3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets the National Register criteria. I recommend that this property be considered significant nationally, statewide, or locally. (See continuation sheet for additional comments.)

6. Function or Use

Historic Functions: DOMESTIC: single dwelling, multiple dwelling, secondary structure

Current Functions: DOMESTIC: single dwelling, multiple dwelling, secondary structure

7. Description

Architectural Classification

COLONIAL: Dutch Colonial

MID-19TH LATE CENTURY: Greek Revival, Gothic Revival

VICTORIAN: Italianate, Second Empire,

LATE 19TH AND 20TH CENTURY REVIVAL:
Colonial Revival, Neoclassical Revival, Tudor Revival

LATE 19TH AND EARLY 20TH CENTURY
AMERICAN MOVEMENTS: Craftsman Bungalow

MODERN MOVEMENT: Ranch, Art Deco

OTHER: Four Square, "I" - house, Bungalow, Minimal Traditional, Gable-front, Pyramidal-roof, Hall and parlor, Central-passage.

Materials

foundation: Brick, concrete, stucco, stone, terra cotta

walls: Brick, wood shingles, wood, vinyl, terra cotta, aluminum, asbestos, concrete, stucco, metal, plastic

roof: Asphalt, metal, slate, wood shingles, clay tile

other: Brick chimneys, wrought iron and plastic porch components, iron and wood fences, stone walls

- **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- **B** Property is associated with the lives of persons significant in our past.
- **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- **D** Property has yielded, or is likely to yield, information important in prehistory or history.

### Criteria Considerations

Property is:

- **A** owned by a religious institution or used for religious purposes.
- **B** removed from its original location.
- **C** birthplace or grave of a historical figure of outstanding importance.
- **D** a cemetery.
- **E** a reconstructed building, object, or structure.
- **F** a commemoratory property
- **G** less than 50 years of age or achieved significance within the past 50 years

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listing. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.CA. 470 et seq.)

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P. O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reduction Projects (1024-0018), Washington, DC 20303.
The Buckhannon Central Residential Historic District is located in Buckhannon, Upshur County, West Virginia. The district consists of primarily single family residential homes along with some secondary buildings such as garages and storage outbuildings. Buckhannon is the county seat of Upshur County and is located in the north-central section of the county. The county is located in north-central West Virginia. Buckhannon is situated below a large oxbow of the Buckhannon River which is directly north and east of the neighborhood. Buckhannon is located east of Weston and south of Clarksburg, West Virginia. It has a current population of approximately 5,639 as of 2010 and is home to West Virginia Wesleyan College which is located east of the proposed historic district along College Avenue.

The nominated area contains approximately 110 acres. West Virginia Wesleyan College dominates the eastern side of the neighborhood with all of the residential areas located to its south and west. The residential neighborhood located to the south of the college was originally known as South Buckhannon and was a separate incorporated town until 1920 when it merged with Buckhannon proper. A more industrial neighborhood and the Buckhannon River are located directly to the north of the proposed district. Downtown Buckhannon is located to the west of the proposed district and is listed in the National Register of Historic Places (12/31/2009), (Photo 1).

Lot sizes within the district are generous and mature trees line the streets. Most front yards are small but side and rear yards, large. There are several individual residences that have very large lots and include small gardens and swimming pools and there are numerous outbuildings within the district. Street amenities include the 1960 cobra style street lights, iron fences, stone walls, picket fences and several small parks. Alleys are numerous within the district and allow for easy access to garages and outbuildings.

There are 424 primary resources and 139 secondary resources, for a total of 563 overall resources. There are 344 contributing buildings; 199 non-contributing buildings; 11 contributing structures; one (1) non-contributing structure; two (2) contributing objects; two (2) contributing sites; and four (4) non-contributing site. Three of the four non-contributing sites are empty lots where a building once stood, thus considered a non-contributing site. There are no individually listed resources within the proposed district but the Downtown Buckhannon Historic District is located to the north and west of this proposed district. The proposed district's boundary generally follows Madison Street on the north, East Main Street on the east, College Avenue to the southeast, and South Kanawha Street to the west.

Almost all of the resources within the proposed district are single family residences. Exceptions include several churches, schools, parks and a few commercial buildings. There are a number of parking lots and a few empty lots within the district; these are marked on the map but not included within the List of Sites nor the site count. The few empty lots and some parking lots represent demolished residences. Although some residences have been demolished, the district retains its neighborhood ambiance and it continues to represent the evolution of the built environment in a residential district.
Many of the residences still retain their pressed metal shingle roofs and rock-faced and panel-faced concrete block foundations as well as many decorative architectural elements such as scrolled brackets, dropped finials, decorative porch posts and patterned shingles. There are a few historic iron fences and stone walls outlining the property lines. The residences are densely packed but with generous side and rear yards and the streets are lined with mature trees and extensive landscaping. Secondary outbuildings, such as garages and storage sheds, are numerous. The buildings primarily date from the late nineteenth century to the middle of the twentieth century and beyond. There are some modern intrusions but they are few in number (Photo 21). Modifications to historic buildings are minimal.

There are a number of extant brick sidewalks (#417) that date to the founding of the neighborhood (Photo 3). The same is true for the WPA (Works Progress Administration) sidewalks (#419) along with the WPA diamond logo inscribed into the sidewalk. The diamond logo has "WPA" in the center with "19" above it and "41" below it (Photo 4). At the southwest corner of Sedgwick and Latham Streets (#418), (Photo2), is an inscription that reads: first line - "1926"; second line - "Phillips & Withers"; third line - "Buckhannon, WVA." Presumably, this was the construction firm who paved the streets in 1926. There are three contributing objects within the district: tapered concrete posts that were originally used for mail boxes in the neighborhood (#420). One has "1935" inscribed on to it and is located at the corner of Sedgwick and Lightburn Streets; one is located at the corner of South Kanawha and Madison Streets and has no inscription; and the third is located on the corner of South Florida Street and Central Avenue.

There are several parks within the district: Jawbone Park (#96) at the southwest corner of Madison and South Florida Streets; the triangle park (Photo 5) in front of the Charles Gibson City Library building (#259A); and a new skateboard park (#240) at the southeast corner of Madison and South Florida Streets. Jawbone and the triangle park likely date to the late nineteenth century as there are newspaper accounts of 4th of July events within Jawbone Park that date to that time period and the triangle park at the junction of Sedgwick and East Main Streets is shown on the 1930 Sanborn Fire Insurance map. Jawbone Park is named for the creek which is named for the shape of the creek as it passes through Buckhannon and it is centrally located between the residential neighborhood and Buckhannon's downtown. It has recently been renovated with a modern sculpture of "Chief Buckhannon" and his son along with landscaping with trees, shrubs and flowers as well as benches and a modern gazebo for events. The triangle park is basically a traffic island that separates Sedgwick Street from East Main Street as it travels east and it has been landscaped with low shrubs and flowers as well as three mill stones.

West Virginia Wesleyan College is located along the eastern side of College Avenue from Meade Street, originally called Seminary Street, to the south and to the north at the Buckhannon River and Lumber Street. The proposed district houses many of the administrative and academic faculty as well as students of the college. South Kanawha Street forms the western boundary of the district and was historically known as "Quality Hill." Many homes of significant individuals of the time period such as judges, lawyers, and other professional gentlemen are located within this area. College Avenue is not named for Wesleyan College,
but rather for the historic, non-extant, Normal and Classical Academy. Meade Street was originally called Seminary Street as a reference to the Academy.

There are a number of churches within the district: the Liberty in Christ Church (#92) on South Florida Street, 1873; a former church building (#104) on South Florida Street, ca.1900; the First United Methodist Church (#117) on South Florida Street, 1910; the First Baptist Church (#154) on Hart Avenue, ca. 1911; the Church of the Transfiguration (#167) on South Kanawha Street, ca. 1980; the Chapel Hill United Methodist Church (#184) on South Kanawha Street, ca. 1980; the African Methodist Episcopal (AME) Church (#200) on Latham Street, 1919, (Photo 16); and the Church of Christ (#240) on Madison Street, ca. 1980. All but the modern church buildings were built in the Gothic Revival style and have brick facades.

The First United Methodist Church (#117) is the most imposing church within the district and it has an attached residence along with a school annex building. The church is a very large hip roof church building with a large square corner tower and an attached residence. It has a red clay tile roof and a red brick facade with stone accents. The tower has a crenellated parapet with brick buttresses with stone coping. The stained glass windows are typical Gothic Revival style pointed openings and have stone lintels and sills.

Another important church building is the currently vacant African Methodist Episcopal Church (#200) on Latham Street, (Photo 16). It was built in 1919 as noted on its cornerstone and is a simple Gothic Revival style church. Its importance lies in its association with the small African American community in the neighborhood in the early twentieth century. It is a simple end gable, red brick building with a square corner tower. All of the windows are pointed and have pointed brick lintels and stone sills. The church has a rock-faced concrete block foundation topped with a smooth stone water table/belt course. As stated earlier, rock-faced and panel-faced concrete block foundations are common within the district.

Next to the AME Church is the African American elementary school which replaced an earlier African American school that was located on Franklin Street, outside of the proposed district. The elementary school (#199) was built ca. 1949. It is a simple one-story, side gable building sided with wood siding. It has windows that are vertically divided and a concrete block foundation. The other African American school within the district is the Victoria or Central School (#8). Prior to 1949, it only served African Americans but after that date it was desegregated and named Central School. The style of Victoria/Central School is very similar to the residences within the district. It has a hip gable roof of pressed metal shingles, a red brick facade and a projecting square entrance bay of three stories. The entrance bay is the primary decorative element on this building with exposed rafter tails, wood shingles on the third story and large double entrance doors with a simple cornice.

Two other school buildings are extant within the district; one is a gymnasium. The original high school building was located on College Avenue at its junction with South Kanawha Street. It was demolished and all that remains of the original school is its gymnasium. It is #26 at 2 College Avenue and was constructed
The gymnasium building is a three-story, flat roof building with a stone parapet and a central cartouche block that reads "PUBLIC SCHOOL GYMNASIUM." The building is red brick and has a projecting primary stone cornice. It has ribbon windows that have been infilled in modern times with wood and smaller windows. There is a large stone surround at the entrance and smooth stone sills on the window openings.

The most elaborate school building within the district is located at 79 East Main Street (#247). It was constructed in Neoclassical Revival style in 1909. It is a massive two-story, hip-roof school building with projecting gable bays. It has a projecting wood primary cornice with frieze and red brick facade with brick detailing on the projecting pilasters of the gable bays and a corbelled brick cornice. Window openings have been infilled with wood and smaller 1/1 windows. Window openings have rusticated stone lintels and sills. The entrance bay is its most character defining element and it is a projecting flat-topped entrance bay with circular brick door opening with stone keystone and accents flanked by corbelled and paneled brick pilasters with dentiled frieze and corbelled brick cornice with stone cap. It has cut stone foundation with stone water table course and is 9 bays wide. It is currently a youth center with a large playground and lawn area surrounding it.

The architectural styles within the district include Dutch Colonial, Greek Revival, Gothic Revival, Italianate, Second Empire, Queen Anne, Folk Victorian, Colonial Revival, Neoclassical Revival, Tudor Revival, Craftsman Bungalow, Ranch and Art Deco styles. The district represents architectural styles from the middle to late nineteenth century up to Modern movements of the early and middle twentieth century. The district also includes many vernacular house types such as Four Square, "I"-house, Bungalow, Minimal Traditional, Gable-front, Pyramidal-roof, hall and parlor and central-passage type. Again, these house types are typical for the historic time period and illustrate the evolution of construction, styles and types within a residential neighborhood.

Summary:
The majority of the resources associated with the Buckhannon Central Residential Historic District are in excellent condition and maintain their original character defining elements, thus maintaining the integrity of the district as a whole. Other defining elements of the neighborhood include historic brick sidewalks, WPA sidewalks and logos, iron fences, stone walls, alley ways and mature plantings, which also contribute to the integrity of the district. The district exhibits many of the architectural styles as well as regional types executed by local builders and craftsmen. The period of significance, ca. 1866 to 1945, dates from the oldest construction date of a building within the nominated area and ends with 1945, which corresponds to the post-World War II small house and modern movement of architecture in the United States.

Post-World War II construction within the proposed district primarily infilled larger lots. There are a few resources considered non-contributing as they were constructed outside of the period of significance. Some alterations have occurred to the contributing buildings such as the addition of modern siding materials,
window replacement and the enclosure of front and rear porches but the majority of the contributing buildings retain their original footprints and historic integrity. Houses constructed within the period of significance that are considered non-contributing have had numerous and/or major changes or very large or intrusive additions and no longer resemble a historic resource.

The following is a complete list of resources within the proposed historic district. The resource numbers used are consistent with the mapping and the photographs.

LIST OF SITES

ARNOLD AVENUE

1. 28 ARNOLD AVENUE, residential  Barlow House
date: ca. 1920
1 non-contributing building (NC)
A. Garage
date: ca. 1920
description: One car brick garage.
1 non-contributing building (NC)

2. 29 ARNOLD AVENUE, residential  Thomas House
date: ca. 1960
1 non-contributing building (NC)
A. Garage
date: ca. 1960
description: One car detached garage with vinyl siding, gabled roof and concrete block foundation.
1 non-contributing building (NC)

3. 30 ARNOLD AVENUE, residential  Bright House
date: ca. 1920
description: Steep two-story, side gable house with central shed dormer on the front. Asphalt shingle roof. Interior red brick chimney. Vinyl siding facade. Front porch within roof overhang has been enclosed with bow windows and wood shingles. Modern 1/1 windows. Stucco foundation. 3 X 5 bays. Bungalow type.

A. Garage
date: ca. 1920
description: One car detached garage.
1 contributing building (C)

4. 32 ARNOLD AVENUE, residential McGrew House
date: 1956
1 non-contributing building (NC)

5. 34 ARNOLD AVENUE, residential Everett House
date: ca. 1910
1 contributing building (C)

6. 36 ½ ARNOLD AVENUE, residential Hall House
date: 1949
1 non-contributing building (NC)
A. Garage
date: 1949
description: One car brick garage.
1 non-contributing building (NC)

7. 38 ARNOLD AVENUE, residential Karickhoff House
date: ca. 1915
1 contributing building (C)

A. Garage

date: ca. 1915

description: One car garage with wood siding and asphalt shingle roof.
1 contributing building (C)

BAXTER STREET

8. BAXTER STREET, vacant school Victoria/Central School
date: ca. 1925
description: Large two-story, hip gable roof, school building. Projecting, end gable, square, three-story, entrance bay; third story has exposed rafter tails, square cut wood shingle siding and paired vertical 3/1 windows. Pressed metal shingle roof. Exposed rafter tails. Red brick facade. Original windows consisted of three single panes; currently the upper sash is infilled. First floor windows infilled with wood. Window openings have smooth concrete lintels and sills. Two-story, flat roof addition on one end; also has red brick facade and single pane windows. Double entrance doors on main entrance bay and on addition. Parged concrete foundation. 9 bays wide. Craftsman style detailing. Originally the African American school in Buckhannon.
1 contributing building (C)

A. Shop Building

date: ca. 1930

description: One-story, end gable building. Metal roof. Metal siding. One side elevation is basically a ribbon of casement windows. Metal canopy with round metal posts over entrance door. Concrete foundation. 1 X 7 bays.
1 contributing building (C)

9. 16 BAXTER STREET, residential Dees House
date: ca. 1990
1 non-contributing building (NC)
10. 18 BAXTER STREET, residential Wesleyan House
date: ca. 1960
1 non-contributing building (NC)

BOBCAT LANE

11. 1 BOBCAT LANE, residential Depoy/Young House
date: ca. 1980
description: One-story, side gable house. Exposed brick end chimney. Asphalt shingle roof. Vinyl siding. 1/1 windows; paired on front, one side. One-story, shed roof canopy with wrought iron posts on a concrete deck. Small entrance porch on side and wraps around to rear and has square wood posts on a wood deck. Concrete block foundation. 4 X 1 bays.
1 non-contributing building (NC)
A. Garage
date: ca. 1980
1 non-contributing building (NC)

CENTRAL AVENUE

12. 20 CENTRAL AVENUE, residential Holmes House
date: ca. 1900
1 contributing building (C)

13. 21 CENTRAL AVENUE, residential Bennett House
date: ca. 1910
description: One and one-half-story, hip gable roof house. Two interior red corbelled brick chimneys. Pressed metal shingle roof. Clapboard siding. 1/1 windows. One-story, modified hip roof, wraparound
porch that is partially enclosed; open portion has Tuscan columns on fishscale shingled balustrade. Rock-faced concrete block foundation. 3 bays wide. Queen Anne Cottage style.
1 contributing building (C)

14. 22 CENTRAL AVENUE, residential
   Ross House
date: ca. 1910
1 contributing building (C)

15. 24 CENTRAL AVENUE, residential
   Riffle House
date: ca. 1900
1 contributing building (C)

16. 25 CENTRAL AVENUE, residential
   Balli House
date: ca. 1910
1 contributing building (C)

A. Garage
date: ca. 1910
description: A historic gable-roofed, gable-end-oriented tile garage with original hinged doors is beside the house at the end of an unpaved driveway.
1 contributing building (C)

17. 26 CENTRAL AVENUE, residential
   Presar House
date: ca. 1900

1 contributing building (C)

18. 28 CENTRAL AVENUE, residential
DeFoe House
date: ca. 1900

description: Two-story, steep hip roof house with gable roof dormers on all sides. Central interior red brick chimney. Asphalt shingle roof. Clapboard siding with corner and frieze boards; fishscale shingles in gable dormers. 1/1 windows with simple surrounds; semi-lunette divided windows with keystones in gable ends. One-story, wraparound porch with square battered columns on an enclosed balustrade. Stone foundation. 3 X 3 bays. Queen Anne style.

1 contributing building (C)

19. 29 CENTRAL AVENUE, residential
Blake House
date: ca. 1920

1 contributing building (C)

20. 31 CENTRAL AVENUE, residential
Welliver House
date: ca. 1920

description: Two-story, hip roof house with hip dormers on all sides. Asphalt shingle roof. Red corbelled brick chimney. Clapboard siding with corner and frieze boards. 1/1 windows with simple surrounds. One-story, full length, hip roof, front porch with south end fully enclosed with 1/1 windows and fishscale shingled balustrade; remainder of porch has square wood posts on a fishscale shingled balustrade. Transom over entrance door. Stone foundation. 4 bays wide. Four Square type.

1 contributing building (C)

21. 33 CENTRAL AVENUE, residential
Tucker House
date: ca. 1990

1 non-contributing building (NC)

22. 34 CENTRAL AVENUE, residential
Finegan House
date: ca. 1890

1 contributing building (C)

A. Garage

date: ca. 1925

description: One-story, end gable, two bay garage. Corrugated metal roof. German siding. 2 X 1 bays.

1 contributing building (C)

B. Fence & stone wall

date: ca. 1890

description: Decorative iron fence with arrow pale tips. Fence is set on top to two, two man cut stones. Cut stone are approx. 3' X 1' X 1'.

2 contributing structures (C)

23. 35 CENTRAL AVENUE, residential Lombard House

date: ca. 1940

1 contributing building (C)

24. 36 CENTRAL AVENUE, residential Kennedy House

date: ca. 1910

description: Tall two-story, end gable house. Asphalt shingle roof with wall gable on the sides. Wall gables have fishscale shingle siding. Fishscale shingle siding with corner and frieze boards on second floor; clapboard siding on first floor. 1/1 windows with simple surrounds. One-story, hip roof, full length, front porch with Tuscan columns on a fishscale shingled balustrade. One-story, hip roof, rear enclosed porch. Porte cochere on side elevation with modern greenhouse on roof. Stone foundation. 3 X 2 bays. Folk Victorian style detailing.

1 contributing building (C)

A. Secondary residence

date: ca. 1910
description: One-story dependency of indeterminate age and usage stands at the rear of the lot, difficult to photograph due to thick underbrush. Appears to be a one-story, "L" shaped plan house. Standing seam metal roof. Unpainted clapboard siding. Wood 6/6 windows. Deteriorated. 1 non-contributing building (NC)

**COLLEGE AVENUE**

25. 1 COLLEGE AVENUE, residential/commercial  Rohr Building
date: ca. 1900

26. 2 COLLEGE AVENUE, school  Academy Elementary School
date: ca. 1922/1958/2005
description: The original high school on the site has been demolished but the original gymnasium is extant and it is a three-story, flat roof school building. It has a parapeted roof with stone cap and a central rectangular cartouche that reads "PUBLIC SCHOOL GYMNASIUM." It has a large projecting stone primary cornice, red brick facade and the window openings have been infilled and small squat 1/1 windows have been inserted. Window openings have smooth stone sills and the foundation is concrete. There is a stone surround around the main entrance and the gym is 5 bays wide. Attached to the gym on the east side is a one-story, shallow end gable addition; likely dates to 1958. Attached to the gym on the west side is a two-story, flat roof addition; also likely dates to 1958. Attached to the west side addition is the 2005 school wing. All additions have red brick facades. Very modified. Resource considered non-contributing due to several new additions and the original building was demolished; resource no longer retains historic architectural integrity. 1 non-contributing building (NC)

27. 3 COLLEGE AVENUE, residential  Augustine House
date: ca. 1920
description: Large two-story, side gable house with large end gable central dormer. Two interior red brick chimneys. Asphalt shingle roof. Wood shingles on dormer and in gable ends; vinyl siding on first floor. Corner and frieze boards. Exposed rafter tails. Modern 1/1 windows with snap-in grids. One-story, front porch within roof overhang has very battered square wood paneled columns on an enclosed balustrade. One bay garage added on east side; family room addition on rear. Concrete block foundation. 4 bays wide. Craftsman Bungalow style.
28. 5 COLLEGE AVENUE, residential          Dahlheim House

date: 1888

description: Two-story, front facing "T" shaped plan house. Pressed metal shingle roof with large central decorative finial. Central interior red brick corbelled chimney. Clapboard siding. 1/1 windows with bracketed surround. Front gable end has sunburst pattern at the top, brackets along the lower eave and spoked brackets at each gable corner on both floors. One-story, hip roof, wraparound porch with slightly battered square wood columns on a non-original enclosed brick balustrade with rusticated concrete cap. Unknown foundation. 3 X 2 bays. Folk Victorian style.

**Style Summary**

The architectural styles within the district include Dutch Colonial, two within district; Greek Revival, one within district; Gothic Revival, four within district, all churches; Italianate, one "I" house with detailing; Second Empire, one within district; Queen Anne, 39 in district, the most numerous style represented; Folk Victorian, 13 in district; Colonial Revival, 20 in district; Neoclassical Revival, two within district; Tudor Revival, 15 in district; Craftsman Bungalow, 25 within district; Ranch and Art Deco, one in district, the
public library, styles. The district represents architectural styles from the middle to late nineteenth century up to Modern movements of the early and middle twentieth century. The district also includes many vernacular house types such as Four Square, 49 within district, the most numerous type represented; "I"-house, 38 in district, some have stylistic detailing; Bungalow, 13 within district; Minimal Traditional, Gable-front; Pyramidal-roof, 10 in district; hall and parlor; and one central-passage type.

*End of List of Sites*
Statement of Significance

The Buckhannon Central Residential Historic District is eligible for listing in the National Register under Criterion C as a locally significant collection of domestic architecture representing many of the architectural styles and vernacular building types typical in the late nineteenth to the mid twentieth century; it is also significant under Architecture for local architect, Draper Camden Hughes. Architecturally, the Buckhannon Central Residential Historic District illustrates high style architecture and simpler styles and types developed through its history.

The period of significance dates from ca. 1866, the construction date of the George R. Latham House, #236, the oldest resource in the district, to ca. 1945, when the traditional architectural styles related to European precedent were largely abandoned for more modern ranch-style houses still constructed today. The district retains much of its original character as a residential neighborhood in a county seat and education center, and the resources retain much of their character defining elements that illustrate architectural styles and types.

History

Buckhannon is the county seat for Upshur County and the only incorporated town within the county. The county was formed from parts of Randolph, Barbour and Lewis Counties on March 26, 1851, with Buckhannon selected as the county seat at that same time. The county tried to form before 1851 but the other counties objected to having their own counties reduced in size. The county was named for Abel Parker Upshur, a Virginian statesman and jurist. Upshur served under President John Tyler as Secretary of State as well as Secretary of the Navy. The town of Buckhannon was officially incorporated May 1852 by an act of the Virginia Assembly.1

Buckhannon is located on the Buckhannon River at the junction of State Route 20 and US Route 33 in the north central portion of Upshur County. The first settler to be noted was Edward Jackson and his family in 1770; they built a rough log house on the bank of the river. Buckhannon's first post office was established in 1804 with John Jackson Jr. serving as the first postmaster. The first school was conducted by Samuel Hall in 1807. The town was surveyed and platted in 1815 with 30 lots; eighteen of the lots were sold for $25.00 each. Daniel Farnsworth built the first house in town in 1822 and the first election was held in his house in 1829. In 1822 the first Methodist Church built in Buckhannon was the old Carper Church, thus establishing a long tradition of Methodism in Buckhannon.2 The William C. Carper House is extant within the district (#191, ca. 1890), and is located at 99 South Kanawha Street. The original Carper homeplace was located on the grounds of WV Wesleyan College and the Carper family graveyard is still on the campus. In 1847, the

2 Ibid.
Staunton-Parkersburg Turnpike was completed through town and this is now Main Street. The original corporate limits of town were from Fink's Run to Jawbone Creek and by 1865 the population was about 600. An 1871 map of Buckhannon shows the courthouse and development only along Main Street. The proposed historic district had only three houses south of Jawbone Creek and two houses towards Florida Street within it, with the majority of the land being used as a common cow pasture. By 1879, O. W. Gray's map of Buckhannon illustrates the start of the residential development in the Central Residential Historic District with houses noted on Madison, Florida, Lightburn, Sedgwick and Kanawha Streets. The southern boundary of the district at that time was Latham Street and the home of George R. Latham (#236) is shown on Madison Street.

George R. Latham was a significant figure in Buckhannon's early history. He was born near Haymarket, Virginia, studied as a lawyer, and was admitted to the bar in 1859 when he began his practice in Grafton, Virginia (now West Virginia). He served as Delegate to the Wheeling Convention in 1861 and served as a Captain in the Union Army of Company B, 2nd WV Volunteer Infantry Regiment, which he organized. He was later promoted to Colonel and then served in the US House of Representatives from 1865-1867. Later positions included consul to Melbourne, Australia from 1867 to 1870; Upshur County School Superintendent from 1875 to 1877; and supervisor for the first census division of West Virginia. He was also a farmer in Upshur County and maintained his home on Madison Street until his death in December 1917. He is buried in the Heavner Cemetery in Buckhannon.

Latham's home (#236) is the oldest home within the proposed district and the only Greek Revival style residence in the neighborhood. The house consists of two, two-story, side-gable wings attached via a one-story wood portico with bracketed frieze and slightly battered wood columns with plinths and caps. The southwest wing was built in ca. 1866 and the northeast wing in ca. 1879. Gray's 1879 map of the house includes the Latham house with its current configuration with an additional rear section. By 1930, the Sanborn Fire Insurance map does not show the rear section but does show the current portico configuration. The current gable wing/addition on the rear appears to have been a separate kitchen dependency which at some point was attached to the main house. Other than those changes noted, the house remains in as-built condition and is the only example of early Greek Revival style in the district.

The Civil War was not a major factor in Buckhannon's history but the Central Residential Historic District did serve as the encampment grounds for Union General McClellan's troops. There was also an encampment site north of Main Street between Washington and Spring Streets in 1863. McClellan established his camp in Buckhannon in order to control the supply lines traveling along the Staunton-Parkersburg Turnpike,

---

3 J. "Lee Heavner," *Memories of a Barefooted Boy Buckhannon From the Years 1865 to 1870 and Later.* (Upshur County Historical Society, 1998)
Buckhannon's Main Street. For the most part, Upshur County was a strong supporter for the Union but of course, there were Confederate supporters as well. Buckhannon saw many raids throughout the War and there was one small skirmish known as the "Battle Hill", now known as Water Tank Hill, with the Confederates winning the battle.  

The first railroad in Buckhannon was the West Virginia & Pittsburgh, arriving in 1881. By 1899, the Baltimore & Ohio Railroad bought them out. With the arrival of the railroad, growth jumped in Buckhannon. The current courthouse was begun in 1899 and completed in 1901. By 1900, Buckhannon had a population of 1,589. The coal, oil and gas industries were developing and Buckhannon became the legal center for these endeavors. Timber also began as a major industry. Lumber was hauled to Buckhannon to be shipped east and west. The Buckhannon Lumber Company was founded by A.G. Giffin and he built large mills on the river banks above town; the company floated logs down the river to the mills where the logs were sawed and shipped out. Other area lumber companies were the Alexander Boom and Lumber Company in Alexander; the Upshur Boom and Lumber Company near the mouth of French Creek; the Philadelphia and Buckhannon Boom Company at Pringles Mill; the Alton Lumber and Coal Company near Alton; the Stockert and Bailey Lumber Company located in Holly Grove; and many others. All of these companies used the railroad to ship out their timber and Buckhannon was the terminus. All of these endeavors contributed to the growth of the Central Residential Historic District with professionals and laborers alike building homes.

Buckhannon's long association as a religious education learning center began with the founding of the West Virginia Normal and Classical Academy in 1882. Prior to that, Buckhannon was the location of the Male and Female Academy during the 1860s. The West Virginia Academy was located at the corner of College Avenue and Kanawha Street. A ca. 1890 photograph of the academy shows the Central Residential Historic District with very few houses along College Avenue and the academy building dominating the landscape. The academy was founded by the United Brethren in Christ's Church and it offered teacher and music education as well as a one-year college program. It lost local financial support eventually and by 1897, the courses were moved to Mason County, West Virginia and the building became a public school. The academy building no longer exists except as a name; the new elementary school on the site today is known as "Academy" School. College Avenue was named for the historic Academy rather than for Wesleyan College.

Perhaps due to this growing and diverse community, West Virginia Wesleyan College established a learning center in Buckhannon in 1890. West Virginia Wesleyan College was founded by the West Virginia Annual Conference of the Methodist Episcopal Church in 1890 and was first known as the West Virginia Conference Seminary. Bennett W. Hutchinson, an ordained minister, was its first president and Roy Reger, the first student to enroll. That first year, 201 students enrolled in order to get pre-college instruction. By 1900, full-
fledged college work was instituted and by 1905 baccalaureate degrees were offered. In 1906, the name was officially changed to West Virginia Wesleyan College after Methodism founder, John Wesley. Pre-college instruction was continued until 1923, at which point it was deemed unnecessary due to the growth of high schools in West Virginia. Wesleyan struggled financially from its founding until about the late 1920s when it received its accreditation by the North Central Association of Colleges and Secondary Schools in 1927.

The students and faculty of the college also contributed to the growth of the Central Residential Historic District with faculty building homes and developers and private individuals building and opening up their homes to students as rentals (Photo 1).

The Central Residential Historic District began as John Smith's farm with a few other residences located in the area. On March 28, 1892, John L. Smith deeded streets and alleys to the city of Buckhannon for public use along with delineating Smithfield Street to be 40 feet wide with nine parcels along it. This began the annexation of the neighborhood from his farm. The Berlin Addition consisting of half blocks was established in 1903 from portions of Smith's farm. Ellen E. Smith, widow of John Smith, deeded additional land to the city for development on May 11, 1905. Other additions followed including Midway Addition and Arnold Addition until the neighborhood we see today was established. John Smith's original house remains in the district today (#399, 5 Third Avenue). The house was built ca. 1874 and is one of the oldest houses within the proposed district, (Photo 26).

The Smith House (#399), ca. 1874, is shown on all the early maps of Buckhannon including Gray's 1879 map and later Sanborn Fire Insurance maps. The "Plan of Buckhannon Upshur County 1871" map does not show the Smith House so it is presumed the house was built between 1871 and 1879 when it appears on Gray's map. The house is the original house within neighborhood. It is a large two-story, rear facing "L"-shaped plan house and is shown as such on Gray's map. The house originally had a two-story, front porch as evidenced by the second story door, but many of the existing decorative elements such as the existing front entrance porch, the bracketed frieze, etc. likely date to the early 1900s. The house is considered an "I"-house type with some Italianate detailing.

Along with all the businesses, churches, schools and other endeavors, Buckhannon worked to improve its infrastructure. Main Street was first paved in 1888 through a bond issue and Main Street was paved with bricks on a bed of sand. Prior to the paving, all the streets were mud. South Kanawha Street, also known as Quality Hill and the Staunton to Parkersburg Turnpike, was paved with stones, and stone walls lined the roadway at the turn of the century. Quality Hill became the place to build a home on and live. Natural gas was provided to the town's residents via nearby gas wells, and the river along with private wells provided water. 

---

9 W.B. Cutright The History of Upshur County, West Virginia, 1907. (Reprinted by McClain Printing Company, Parsons, WV, 1977)
Electric Light and Water Plant and once incorporated, supplied these utilities town-wide.\textsuperscript{10} The Civil War had brought the first telegraph to the region, and by 1922 the first residential telephone was installed in the Stuart/Young House by Mr. G.O. Young. The secondary streets were first paved in the 1920s as automobiles became more common, and by the late 1930s, the Works Progress Administration (WPA) was updating the streets and installing new sidewalks within the district (Photo 4).

By 1912, Buckhannon supported tanneries, lumber companies, planing mills, brick company, foundry, ice plant, woolen mills, glass factories, wholesale grocers, peanut factory, marble and granite works, wholesale produce house, and livestock and agricultural products. Buckhannon had a diverse economic base and grew in response to all of these industries and goods.

A small African American community existed in Buckhannon after the Civil War and the first African American neighborhood was located in the Franklin Street area; Franklin Street is to the west of South Kanawha Street and outside the district. The first African American school was located on Franklin Street and the Simpson Church was located directly behind the existing courthouse. Neither building stands today but there are others associated with the community including the Elementary School (#199) located at 4 Latham Street. This school was built in 1949 to replace an earlier school located on Victoria Street. Also on Latham Street is the African Methodist Episcopal Church (#200) built in 1919. It is a simple red brick Gothic Revival style church (Photo 16). Nearby on Baxter Street is the Victoria/Central School (#8) built ca. 1925. It is very similar to Craftsman style residences within the district, having a hip gable roof, a red brick facade with accented scalloped shingles and a projecting entrance bay.

By the turn of the century, the African American community had extended into the Victoria Street area, on the south side of South Kanawha Street, and their school was located approximately where the current Board of Education building now stands (#416). In 1913 the new principal, C.W. Warfield, began a full high school with college preparatory courses. The school on Victoria Street burned down about 1925 and the Victoria/Central School was built on Baxter Street. This area became the focus of the African American community with two schools and a church building. The Victoria School (#8) was used by African American students until about 1949. By then the community had declined and the majority of the students were transported to the Kelly Miller School in Clarksburg; elementary students attended the small extant school that was built in 1949 (#199). The Victoria School became known as the Central School and was used by white students into the 1950s until desegregation was instituted.\textsuperscript{11}

While the African American community was never very large in Buckhannon, they were active in the community. A column in the local paper titled, "In Colored Circles", highlighted parties, visits, illness, etc.

\textsuperscript{11} Noel Tenney. Oral interview with author, February 1, 2011.
in the African American community. There were also African American-owned businesses, notably James Davis's ice cream shop on Main Street, and well-known African American families who contributed to the culture. Margaret Jeffards was a African American teacher in Upshur County and her home was located on Meade Street. Molly Bell Taylor was the first African American teacher in the county and her home was located at 18 Sedgwick Street (#340). William Warfield was a well known singer who sang in the Broadway play "Showboat" and his home was 12 Latham Street (#205).  

Buckhannon's population in 1900 was 1,589; by 1910, 2,225; and by 1920, 3,785. The town's growth is attributable to its place as the county seat and all legal endeavors in the county transpired there along with its diversified businesses such as timber, mills, tanneries, groceries, etc. Since the Central Residential Historic District is one of the larger neighborhoods in Buckhannon, it can be assumed that this growth was also reflected within it. By 1930 the town population had grown to 4,374; by 1940, a small increase to 4,450. The late 1930s and early 1940s were a time of slow growth due to the Great Depression. The WPA, as part of Roosevelt's New Deal programs, was active in Buckhannon with building the Gibson Memorial Library, (Photo 20), (#258, 1941), street paving and sidewalk installation. Once World War II was over the town began to grow again and by 1950 the population was 6,016; by 1960, 6,386; and by 1970, 7,261. The population has steadily declined from the 1970s to its current population in 2010 of 5,639.  

Architecture

The proposed district is eligible under Criterion C for Architecture as a locally significant collection of nineteenth and twentieth century architecture. The Buckhannon Central Residential Historic District displays a variety of styles of architecture, both high style and vernacular architecture, in a primarily residential district developed from the mid nineteenth to the mid twentieth century. Styles within the district range from Greek Revival to Colonial Revival to the Bungalow. Though the styles vary, the neighborhood is a dense collection of residential architecture representing the development and popularity of the architectural styles from the last decades of the nineteenth century and the first decades of the twentieth century. The district is also significant as a collection of work by local Buckhannon architect, Draper Camden Hughes.

The Buckhannon Central Residential Historic District has grid-oriented streets with modest to moderate size houses and modest lawns, rear and side yards. The neighborhood is walkable, adjacent to downtown and the college, and accessible to major transportation routes. It is also laid out in a relatively flat bottomland, thus allowing for the lot sizes and architectural styles exhibited.

13 Official Register Division of the West Virginia Legislative Hand Book and Manual. Multiple years.
The three oldest houses within the district are the George Latham House, ca. 1866/ca. 1879 (#236); the Simpson/Collins House, ca. 1870 (#170); and the Westfall/Hart House, ca. 1870 (#187). The Latham House (#236) is the only example of early Greek Revival style in the district. The Greek Revival style dates approximately from 1825 to 1860 so the Latham House is a later example of the style.

The Westfall/Hart House, ca. 1870 (#187) retains most of its original architectural integrity and elements. It is a two-story, front facing "L" shaped plan house with two-story, projecting, three-sided bay on the side. It has clapboard siding with corner and bracketed frieze boards. Decorative elements include scrolled corner brackets and cut-out vergeboard with central dropped finial in gable end. It has a one-story, hip roof, wraparound porch with curved corner and Tuscan columns on a scallop shingled balustrade and a stone foundation. The Westfall/Hart House is considered to be an "I"- house type with Queen Anne style detailing and is a contributing resource.

The Greek Revival style is considered to be within "romantic" house styles that were developed in the United States from the early 1800s to late 1800s and were a trend of architectural fashions developed by Andrew Jackson Downing in his book "Cottage Residences." Romantic styles also included Gothic Revival and Italianate styles. There are no Italianate style nor Gothic Revival style residences within the proposed district but all the historic churches within the district are in Gothic Revival style. These include the Liberty in Christ Church, 1873 (#92); a former church building, ca. 1900 (#104); the First United Methodist Church, 1910 (#117); the First Baptist Church, 1911 (#154); and the African Methodist Episcopal Church, (Photo 16), 1919 (#200). All have brick facades, steeply pitched roofs, square towers and Gothic shaped pointed windows with hoods. The largest example is the First United Methodist Church (#117). It is a very large hip roof church building with projecting gable bays, a large square corner tower and an attached residence. It has a red clay tile roof with stone coping and a red brick facade. The tower has a crenellated parapet with stone coping and brick buttresses with stone shoulders. All openings have stone lintels and sills. There is a large one-story, arcaded Gothic style stone opening with a large Gothic style stained glass and wood filigree window on the front with stone hood and stone still. The attached residence is a two-story, hip roof with same roof as church and gable dormers, interior red corbelled brick chimney, and decorative front porch. There is also a modern addition which houses a school. The church is in excellent condition.

The next trend or fashion in architecture is known as the Victorian era. Victorian styles were popular during the reign of Britain's Queen Victoria from 1837 to 1901, but in the United States this era was from approximately 1860 to 1900. Victorian styles include Second Empire, Stick, Queen Anne, Queen Anne Cottage (a subtype of Queen Anne), Shingle, Richardsonian Romanesque and Folk Victorian. The styles were allowed to proliferate due to the growth in railroads, industrialization and newer construction techniques such as balloon framing which was a lighter alternative to heavy timber framing. Most Victorian styles are based on medieval examples and include steeply pitched roofs, varying textures and colors and "gingerbread." Although the Stick, Shingle and Richardsonian Romanesque styles are not represented within
the district, there is one Second Empire style example. This is the former Forman Surgical Hospital building, 1904 (#114), located on South Florida Street. It is a three and one-half-story brick building with a symmetrical façade and a centered entry. The façade is dominated by a double-gallery veranda with Tuscan columns and a delicate balustrade with attenuated wood balusters. It has a stylized mansard roof terminating in a hipped roof penetrated by hipped and gable dormers, some finished in scalloped shingles and including a dormer on the façade with a Palladian window. Fenestration is flat-topped, without notable ornament. It has a red brick façade and a stone foundation. It has been converted to apartments. It has some Colonial Revival detailing so is not a pure Second Empire style building; however, it does illustrate the style within the district and is in excellent condition and retains the majority of its character defining elements.

One of the most common styles represented in the district is the Queen Anne (Photo19) and Queen Anne Cottage styles. Many of the examples contain Queen Anne style detailing and elements rather than being representations of the pure style. The Queen Anne style fits firmly within the Victorian styles and was popular in the United States from approximately 1880 to 1910. Queen Anne Cottage style is a subtype of Queen Anne and both share steeply pitched roofs, often hip gables; the use of shingle cladding or multiple facade materials; one-story porches, often wraparound; and lots of decorative spindlework, vergeboard, brackets, etc. Queen Anne style houses within the district include #12, 15, 17, 18, 22, 33, 34, 38, 49, 50, 55, 108, 122, 131, 136, 139, 157, 162, 172, 174, 179, 243, 245, 246, 251, 255, 296, 297, 309-311, 326, 334, 338, 346, 367, 374 and 384. The style is well represented on Central Avenue, College Avenue, Florida Street, Kanawha Street, Main Street, Meade, Sedgwick Street and Smithfield. One of the best known examples of the style is the Arnold House (#179), ca. 1900, located at 82 South Kanawha Street. It is a two and one-half-story, hip roof house with projecting two-and-one-half-story, gable bay on the side and gable and hip dormers and three-story, corner tower with pyramidal roof with finial. There is a side gable bay with partial return cornice and frieze with brackets and dentils. There is a two-story, curved corner tower with scalloped wood shingle and clapboard siding facade. The house has 1/1 windows with simple surrounds; Roman grille upper sashes on dormer windows; a one-story, wraparound porch with Tuscan columns and spindled balustrade; and transom over the double entrance door. There is an elongated oval window on central, front of second floor with compass point keystones and a porte cochere on the side with same components as porch. While the house is considered Queen Anne style it has some Colonial Revival detailing in the porch components. The house is not only striking for its architecture but for its association with Elizabeth Arnold, whose husband was the son of Laura Jackson Arnold, sister of "Stonewall" Jackson of Civil War fame. Laura Jackson Arnold had a special bedroom in the house and lived there until her death in 1911. The house remained in the Arnold family until 1960. The Arnold House was designed by Draper Camden Hughes, architect, and was built by Rolandus Post, Bob Coyner and Dr. Orne Post.

The Queen Anne Cottage style is a subtype to Queen Anne style and as stated earlier, shares the style's characteristics although usually on a smaller scale. Examples within the district include #13, 16, 52, 222, 283, 299, 316, 327, 373, 385, and 393. The examples date from ca. 1910 to ca. 1925 with the most examples on Meade and Smithfield Streets. The house located at 25 Central Avenue, (#16), ca. 1910, is a good example.
example of the style. It is a one-story, hip gable roof house with a slate roof. It has a red brick facade; fishscale shingles in front gable end, and a Palladian window. It has 1/1 windows with smooth concrete lintels and sills. There is a full length, front porch with Tuscan columns, a three-sided projecting bay on front with paneled bulkheads and transoms, and a three-sided projecting bay on the side with red brick facade. There are arched brick hoods over the basement windows. At the rear there is a small garage that matches the house style.

The last Victorian era style within the district is the Folk Victorian style. It is characterized by its simple "I" or "L" shaped form with brackets and vergeboard at the eaves and spindlework on the front porch and was popular from 1870 to about 1910. Examples within the district date from 1888 to ca. 1915 with the majority of the examples located on College Avenue. The Dahlheim House (#28) located at 5 College Avenue is the oldest example in the district, 1888. It is a two-story, front facing "T" shaped plan house with a pressed metal shingle roof with large central decorative finial. It has clapboard siding and 1/1 windows with bracketed surround. The front gable end has a sunburst pattern at the top, brackets along the lower eave and spoked brackets at each gable corner on both floors. There is a one-story, hip roof, wraparound porch with slightly battered square wood columns on a non-original enclosed brick balustrade with rusticated concrete cap. Other examples are #24, 30, 56, 57, 58, 60, 110, 111, 252, 300, 314, and 330.

Revival styles followed Victorian era styles. These are styles based on the more traditional styles built in Europe and early on in the New World. The styles generally date from the last decade of the nineteenth century up to as late as ca. 1955. The Revival styles include Colonial Revival, Dutch Colonial Revival (a subtype of Colonial Revival), Neoclassical and Tudor Revival. The most common Revival style in the district is Colonial Revival which dates from about 1880 to 1955. Examples include #37, 65, 102, 107, 113, 115, 127, 132, 143, 155, 163, 169, 173, 182, 185, 193, 197, 250, 260, 264, 294, 295 (Photo 23), 298 and 382, with the most examples on South Kanawha Street. A good example of the Colonial Revival style in the district is the Stuart/Young House, (#155), 1907, located at 48 South Kanawha Street. It is a three-story, imposing red brick-finished residence with a symmetrical three bay façade and a centered entrance suggestive of a central-passage interior plan. There is a Palladian window centered on the second story of the façade and a large gable dormer penetrates the slope of the roof above. An open porch extends across the façade, supported with square wood pillars, trimmed with small modillions under the eaves, and enclosed within a solid brick railing. The house has a slate roof, brick facade and stone foundation. The lot is a large corner lot with brick entrance pillars and a separate garden lot.

There are two Dutch Colonial Revival style houses within the district. This style is a subtype to Colonial Revival and its most distinguishing feature is a gambrel roof; both examples have gambrel roofs. The first example is the U.G. Young House, (#175), ca. 1900, 77 South Kanawha Street (Photo 15). It is a two and one-half-story, five bays wide residence finished in shingles and rock-faced stone, with a laterally-oriented gambrel roof and an imposing wraparound two-story veranda on the façade and side elevation. There are Palladian windows in the pediments of the gables and wall dormers on the façade. There are several rock-
faced stone chimneys. Fenestration is generally flat-topped, with some art glass. This home is not only architecturally significant for its style but also for its architect, Draper Camden Hughes, and for its association with prominent lawyer and one time State Senator, U.G. Young. Young had the home built around the turn of the century for an estimated cost of between $15,000 and 20,000 with a total of thirty rooms, including the basement. The Young family sold the home in 1938 when it became a funeral home for many years. It has since been sold to another owner as a residence who has restored its former grandeur. The home is situated on a large lot elevated above Kanawha Street.

A more modest Dutch Colonial Style house is the Walsh Home, (#290) ca. 1925, located at 7 Meade Street. Meade Street contains an unusual number of high style houses representing the earliest house styles to the latest (Photo 22 & 23). The Walsh House is a two-story, gambrel roof house with front projecting gable bay. It has a partially engaged red brick chimney and partial return cornice. It has square cut and scalloped shingles on the second floor, clapboard siding on the first floor and 1/1 windows. The front gable end has arched vergeboard with a louver in the center. There is a one-story, front porch within the roof overhang and it has Tuscan posts on one side; the remaining half is enclosed with windows. It appears to be in as-built condition.

The next Revival style noted in the district is Neoclassical. Neoclassical style is characterized by two-story tall porticos with classical columns and a balanced facade with a center entrance door flanked by window openings. The style dates from 1895 to 1950. One of the examples was noted in Section 7 about schools; it is the Stockert Youth Center/Public School (#247), 1909, located on East Main Street. It is an excellent public building example of the style. The other example in the district was a private residence originally but is currently a funeral home. This is Judge McWhorter's residence known as "Gray Chimneys" (#188), ca. 1907, 95 South Kanawha Street. It is a three-story, side gable house with parapeted end walls and a large two-story, gable portico on the front. There are two interior brick chimneys and end parapet walls incorporate end partially engaged chimneys. End gable dormers flank the portico and have scrolled pediments, partial returns, scallop shingles and Palladian windows. Gable ends have dentils, brackets and scalloped shingles. Portico tympanum also has Palladian window and paired Corinthian columns and pilasters. The house has a gray brick facade with wide dentiled and bracketed frieze, 8/1 windows, most with stone jack arch lintels with keystones. There is a one-story, entrance porch with Tuscan columns on first floor and spindled balustrade on second floor with paneled corner newel posts with acorn finials and a one-story, end gable side porch with decorative elements. Gray Chimneys was designed by Draper Camden Hughes for Judge J. C. McWhorter. The home took two years to complete at a cost of $15,000 and has 22 rooms with a fireplace in each room. McWhorter was a law partner to U.G. Young, and it is said that when they shared an office they also shared a table, one on either side. The home stayed in the McWhorter family until 1948 when Mrs. Pauline Bennett (daughter to the Judge) sold the house to the Poling family who converted the residence to a funeral home.
The last Revival style in the district is Tudor Revival style. This style was popular from about 1890 to 1940 and its character defining elements include a steeply pitched roof, usually a side gable with a cross gable; massive exposed chimneys, often with decorative accents; half-timbering in the gable ends; a catslide roof entrance bay; often semi-lunette entrance doors and surrounds in a gabled entrance bay; and tall narrow windows, often grouped and multiple panes. The examples of the style within the district include #6, 59, 73, 78, 82, 145, 152, 161, 178, 190, 194, 232, 285, 292, 305, 335 and 400. The examples are spread throughout the district although there are several examples on South Kanawha and Meade Streets. A fine example is the Adams House (#335), ca. 1930, 11 Sedgwick Street. It contains almost all of the character defining features of the style with a steep two-story, side gable roof with projecting, two story tall, entrance bay with catslide roof. It has a large exposed red brick chimney on the front and an end gable dormer on the front. It has a red brick facade and 6/6 windows with brick lintels and sills and shutters. It has a soldier course water table and a brick foundation. It also has a matching red brick garage located to the rear.

The next American style/type to become popular in the United States is the Four Square. It is really a house type rather than a style although often called a style. The Four Square or "Transitional Pyramid" or American Four Square was a response to the more ornate Victorian era styles and the Revival styles popular through the last half of the nineteenth century. Four Squares date from the mid-1890s to the late 1930s and incorporate elements of the Prairie and Craftsman styles. They are also often "dressed up" with Colonial Revival and other detailing. Basically they are a square box with four rooms above, four rooms below, dormers and a full-width front porch. Four Squares often have hip roofs with a central hip or shed dormer; some examples have dormers on three or even four sides. The type was easy to replicate so it was often found in Sears and other kit house types which were shipped throughout the country via railroads. The Four Square type is the most common house within the Buckhannon Central Residential Historic District. Examples are: #5, 7, 14, 19, 20, 44, 51, 66, 70, 72, 74-77, 80, 100, 101, 107, 118, 126, 130, 134, 137, 146, 148-150, 153, 160, 180, 186, 210, 244, 257, 261, 262, 264, 266, 269-271, 273, 294, 312, 322, 352, 354, 376 and 401. Concentrations of the type are found on Elizabeth Street and on the eastern end of Main Street. A good example of the type is the Halle House (#150), ca. 1915, 36 Hart Avenue. It is a two-story, hip roof house with hip dormers. It has a wide frieze board and elongated oval window on second floor, central front, with compass point keystones. It has a rock-faced concrete block facade with red mortar. Decorative rock-faced concrete block with circles of flowers separate the two floors. The house has 1/1 windows with smooth concrete sills and a one-story, hip roof, wraparound porch with square posts. The porch components are not original but the house retains its decorative elements and original configuration.

The Craftsman Bungalow style was developed at about the same time as the Four Square house type, although a bit later, from 1905 to 1930 (Photo 25). Gustave Stickley, a furniture maker, developed the style along with house plans in his book "The Craftsman" and the emphasis was on handcrafted features. These

features include roof beams that pierce the exterior, low pitched roofs with large eave overhangs, decorative beams or braces in the eaves and front porches with square and often battered columns. Often, there are also large stone exposed chimneys and novelty-style windows. The district has some good examples of the style: #27, 35, 42, 68, 97, 99, 119, 125, 142, 181, 205, 220, 234, 274, 288, 306, 328, 336, 349, 380, 390, 396, and 409. The examples are spread throughout the district but there are small concentrations on Florida and Meade Streets. A good small example of the style is the Douglas House (#68), ca. 1925, 1 Elizabeth Street. It is a one-story, end gable house with cross gable projecting bays on the side. There is a gable dormer on the front and the gable ends have scalloped shingles, knee braces and divided tripartite windows. The house has narrow clapboard siding with fishscale shingles in gable ends and on dormer. There is a one-story, wraparound porch with very battered and paneled wood posts on brick piers and a wood railing between the piers with 4/1 windows with simple hoods and surrounds; leaded glass upper sash. The house has many of the features which define the Craftsman style.

Also represented in the district is the Art Deco style. It features streamlined designs with smooth wall surfaces and geometric lines and accents as well as geometric motifs and vertical accents. There is an excellent example of Art Deco style in the proposed district: the Charles W. Gibson Memorial Library (#258), located at 105 East Main Street and constructed by the Works Progress Administration (WPA) in 1941 (Photo 20). The building is a one-story, flat roof, public library building. It has metal roof coping and a red brick facade. There are ribbon corner windows with smooth stone sill course and metal canopy above and a tall Art Deco style concrete entrance surround with curved edges and rectilinear accents. Glass block sidelights flank the entrance door. "PUBLIC LIBRARY" is incised in the concrete above the door. The library illustrates the style through the ribbon windows and the vertical emphasis of the entrance surround. It is still used as a city library building.

There are several house types within the district as well including the I- house, hall-and-parlor, central-passage, gable-front, pyramidal-roof, and bungalow. Interspersed within the district are also some minimal traditional and ranch houses constructed outside the period of significance. The hall-and-parlor house is one of the earlier types found in the district and is composed of two rooms arranged side by side and accessed through one exterior door. Examples are #151, 275, 302, 345, and 369.

"I" houses developed from hall and parlor types through the addition of a second floor. "I"- house types are common throughout the district with concentrations located on South Kanawha and Meade Streets and they range in date from ca. 1870 to ca. 1940. While the "I" house often has an "I" configuration, the name is derived from its identification and pervasiveness in Indiana, Illinois and Iowa. The "I"- house type also lends itself easily to additions, alterations and numerous decorative detailing. Houses with an original "I" configuration often evolve into "L" or "T" houses with the addition of additions. It should be noted that in some of the descriptions, a house is described as an "L" or a "T" and this describes the floor plan/configuration rather than a type. These examples were built in those configurations originally rather than starting out as an "I" house with additions added to them. Virginia and Lee McAlester in A Field Guide
to American Houses note that typical house plans include front-facing L plans or rear-facing T plans, etc. "I" houses within the district are: #29, 32, 48, 109, 140, 158, 159, 164, 165, 187, 191, 213, 219, 254, 259, 276, 278, 293, 303, 308, 324, 325, 329, 340, 342, 343, 372, 399 and 410. The Manspeaker House (#303), ca. 1900, on Meade Street is a good simple example of the style. It is a two-story, front facing "T" shaped plan house. It has clapboard siding with corner boards; scalloped shingles in gable ends. There are 1/1 windows with wide surrounds and scrolled corner brackets. It has a one-story, wraparound porch with Tuscan columns on an enclosed balustrade and a gable pediment entrance. It is in as-built condition with minimal changes.

There is one example of the central-passage type in the district: the Cole/Bailey House (#167), ca. 1900, located at 66 South Kanawha Street. The central-passage is similar to the hall and parlor type but with a passage or hall between the two rooms. It is usually two stories tall as well. The plan was developed by the British and was common on the East Coast as settlers arrived and replicated the design. The Cole/Bailey House is a two and one-half-story, gable house with a central end gable dormer on the roof ridge flanked by end gable dormers with partial returns, wood shingles and vertical 3/1 windows. There is a two-story, three-sided, projecting bay on the side and the gable ends have wood shingles and brackets in frieze. It has clapboard siding with corner boards and 1/1 windows with simple surrounds; shutters on the front. There is a one-story, hip roof, central porch on the second floor with brackets, wood shingle balustrade and square wood posts with caps and a one-story, hip roof, full length, front porch with very battered columns and pilasters on an enclosed wood shingled balustrade. The entrance door has sidelights. The house has Colonial Revival and Craftsman style detailing. The house is in excellent condition and retains its character defining features.

The gable-front house type is one of the more common vernacular types within the district. A gable end is the principal facade on this house type and it can be one-story or two-story. Construction dates range from 1898 to ca. 1965. Examples are scattered throughout the district with concentrations on College Avenue, Meade and Smithfield Streets. The examples are: 36, 43, 47, 121, 176, 204, 214, 218, 223, 263, 277, 279, 287, 291, 315, 356, 358, 365, 386, 395, 408 and 413. A small example of the type is the Bryant House (#121), ca. 1920, at 60 South Florida Street. It is a small one and one-half-story, end gable house with cove siding with corner and frieze boards and 1/1 windows with simple surrounds. It has a one-story, shed roof, entrance porch with turned posts.

Architect, Draper Camden Hughes

The district is also eligible under Criterion C: Architecture as a locally significant collection of the body of work of local Buckhannon architect, Draper Camden Hughes. Hughes worked exclusively in Buckhannon at the turn of the century and several of the larger homes on South Kanawha Street, known as Quality Hill at one time, can be credited to him. Hughes was Upshur County's principal architect at the turn of the century. Hughes began his working career as a carpenter and was a self-taught architect. His house designs likely
came from the pattern books of the turn of the century and as you drive through Buckhannon, his house designs are clearly evident.

Hughes was born March 24, 1853 in Monongalia County. Hughes went to Kingwood in Preston County at the age of seventeen to learn carpentry and by 1880 had moved part-time to Buckhannon to supervise the construction of his design for the Methodist Episcopal Church (located where City Hall stands today). By 1883 Hughes had moved permanently to Buckhannon and formed a partnership with L.P. Loudin to build the county's first planing mill. At that time, Buckhannon was a major hub for the timber industry so this made sense for Hughes' architectural practice as well as an entrepreneurial venture. Hughes joined the First Baptist Church in Buckhannon in 1888 and served as their Sunday School superintendent and as a member of the Board of Trustees; he also designed the extant First Baptist Church (#154), 1911, located at the corner of Hart Avenue and South Florida Street. Hughes opened the very first Upshur County architectural office in Buckhannon in 1890. Hughes, in addition to his business ventures and architecture practice, also served as Mayor of Buckhannon for three years in a row, 1889-1891, as well as a member of the Board of Education for several years. Hughes sold his planing mill interest in 1890 in order to concentrate on his architectural practice. The Hughes family home is still extant within the proposed district (#25), ca. 1900, 1 College Avenue but it has been extensively altered and no longer retains integrity. In November of 1904 Hughes purchased land by the Poe Bridge near the northwest side of the abutment and likely used this land for his river excursion boat which held 100 people and traveled the river from 1900 to 1908.

In addition to the church noted above, Hughes can be credited with the designs for the following houses, all located on South Kanawha Street:

- Stuart/Young House (#155), 1907, 48 South Kanawha Street, Colonial Revival
- U.G. Young House (#175), ca. 1900, 77 South Kanawha Street, Dutch Colonial Revival
- Arnold House (#179), ca. 1900, 82 South Kanawha Street, Queen Anne with Colonial Revival details
- Judge McWhorter House (#188), ca. 1907, 95 South Kanawha Street, Neoclassical Revival
- Rev. Silas Tamblyn House (#189), 1898, 97 South Kanawha Street (Photos 14 & 15)
- First United Methodist Church (#117), 1910, 52 South Florida Street, Gothic Revival

It is likely that other buildings within the district can be credited to Hughes. As seen by the styles he chose to work in, his work spans the Romantic, Victorian and Revival style eras. Hughes died October 26, 1924 in Buckhannon and is buried in Heavner Cemetery after leaving a lasting mark on the city of Buckhannon and Upshur County.
Comparisons

The only other district in Buckhannon is the Downtown Buckhannon Historic District located just north/northwest of the Buckhannon Central Residential Historic District. The two districts are separated by a few blocks of mostly modern buildings and empty lots. The downtown district includes primarily commercial resources and the county courthouse while the Central Residential district is, as its name suggests, mostly residential. The area to the southeast is primarily residential; however, overall the lots and the houses are smaller. This area was originally incorporated as a separate city known as South Buckhannon and was developed by the Buckhannon Land Trust Association. The area to the west of the district includes primarily homes dating to the mid twentieth century. West Virginia Wesleyan College is situated to the east and a small industrial area is situated to the north.

Other similar residential districts in the surrounding counties include the Clarksburg Quality Hill Historic District in Harrison County, the Wees Historic District in Randolph County, and the Weston Downtown Residential Historic District in Lewis County. The Clarksburg Quality Hill Historic District has similar architectural styles from the early twentieth century, such as Queen Anne, Italianate, Colonial Revival, Gothic Revival, Four Square type, and Craftsman Bungalow, but is much smaller overall than the proposed district containing only 33 contributing resources. Both districts are situated near their respective commercial centers that contain historic turnpike transportation routes. Buckhannon and Clarksburg are both their respective county seats with the county courthouse as a focal point in their downtowns and the residential districts radiating out from the town center. Both districts also served as a major focal point in their county as early educational centers in the state.

The Wees Addition Historic District is very similar to Buckhannon's Central Residential Historic District in that both districts are adjacent to the colleges and house many of the staff and students of the colleges. The Wees Addition has a similar period of significance and many of the same architectural styles as Buckhannon's proposed district. The Weston Downtown Residential Historic District is probably most similar to the proposed district. It was listed under Criterion C: Architecture in 2005 with a similar period of significance and over 250 resources.

Summary

The Buckhannon Central Residential Historic District is eligible for listing in the National Register of Historic Places for its locally significant collection of architecture that spans a variety of architectural styles from the mid nineteenth century to the middle of the twentieth century. It is also locally significant for local Buckhannon architect, Draper Camden Hughes, whose body of work illustrates the architectural styles popular in the late nineteenth to the early twentieth centuries. The period of significance begins ca. 1866 and corresponds to the oldest resource in the district; the period of significance ends ca. 1945, corresponding to a major change in architectural styles in both the country and Buckhannon. All of Hughes extant work in the

VERBAL BOUNDARY DESCRIPTION:
The boundary of the Buckhannon Central Residential Historic District begins at the northeast corner of the property line of resource #245 on East Main Street. It continues to the east along the rear, north, of the property lines of the resources along East Main Street to the junction of East Main Street and the west side of College Avenue, with resource #284 to the north and resource #67 to the south. The boundary then continues south, southwest along College Avenue. The boundary continues to the south to the junction of South Kanawha Street and Victoria Street to resource #195 at which point the boundary runs along the rear, west side, of South Kanawha Street to the junction of South Kanawha Street and Madison Street. The boundary then continues north northeast along the south side of Madison Street to Jawbone Park, resource #96. The boundary then runs north along the rear, west, property lines of resources along South Florida Street to resource #92, northwest corner. The boundary turns east to the east side of South Florida Street to the southwest property line of resource #241 at which point it turns north to the rear, north, property line of resource #243, directly behind the city hall building. The boundary continues east along the rear property lines of the properties along East Main Street to meet at the beginning of the boundary at the northeast rear property line of resource #245.

BOUNDARY JUSTIFICATION:
The Buckhannon Central Residential Historic District consists of the historic residential neighborhood located between West Virginia Wesleyan College to the east, the Downtown Buckhannon Historic District to the north and west, South Kanawha Street to the west and East Main Street to the north and east, that retains historical and architectural integrity.

The area to the south and to the east is a neighborhood originally incorporated as a separate entity called South Buckhannon. The resources in South Buckhannon were primarily developed as a whole by the Buckhannon Land Trust Association ca.1891. Overall, lots and houses in this area are smaller than that in the proposed district. The campus of West Virginia Wesleyan College can be considered a separate entity as an education facility and not a residential neighborhood. The residential area to the west of South Kanawha Street contains primarily homes dating to the mid twentieth century and the area north of East Main Street is industrial.
